

## A free video player-converter-subtitles downloader was hidden for chosen ones?

Maybe. A skilful programmer Artur Majtczak from Poland wrote Allplayer in delphi for himself and his friends as the answer for GOM, VLC or KM. It wasn't long and his free player won 5 mln users in 40 mln inhabitant country. What was so unique? Maybe that it can play almost all formats including MKV, DivX, Xvid, Flash, QuickTime, DVD, MP3, FLAC files? Maybe that you can download video files from YouTube and RedTube on your PC with a special plugin from the level of the player? Maybe built in special connectors to the Opensubtitles.org servers that enable you to watch movies with subtitles in the instant mode and finding the cover and description of the movie? Maybe free video converter? Maybe LiveUptate service which keeps you updated with the latest codecs-pack? I guess that everything and moreover that it is in one place and for free.
